ABOUT THE FDP

FDP on **"IoT Application Development Using Advanced Processors"** is on today's most buzzing word "Internet of Things (IoT)". The Internet of Things is expanding at a rapid rate and becoming increasingly important for professionals to understand what it is, how it works. The explosive growth of the "Internet of Things" is changing our world and the rapid drop in price for typical IoT components is allowing people to innovate new designs and products at home. The course focuses on Rasberry Pi 3 and Python scripting language with applications of IoT. IoT is the idea of making devices (namely sensors, actuators and other objects) smarter by linking them to the Internet. This FDP serves as a platform to train and educate the research scholars, faculty and people from industry to interact on cutting-edge technologies in this emerging area.

ABOUT SHORT TERM COURSE

A good portion of an academician's life and work is teaching. Indeed, teaching is one of the main goals of an Institute. Most faculty members would like to motivate and inspire students to learn deeply in their courses. Still, as is well known, some teachers are more effective than others. This workshop is about becoming a more effective teacher. It should be first stated clearly that one cannot be an effective teacher for a subject without having a decent understanding and knowledge of that subject.

However, even with understanding of the subject, one may not be an effective teacher. The aim of this workshop is to help faculty, or aspiring faculty, who have a decent understanding of the subject matter to become effective teachers.

Programe objectives

- Analyse components of effective teaching
- Identify paradigm change in Learning-Teaching system
- Design instruction for active learning
- Manage classroom behavior
- Develop a tool for assessing teaching effectiveness

PROGRAMME REPORT

Name of the Programme : A Five-Day Short-Term course on "Effective Teaching"

Dates : 15th - 19th JULY-2019

Details of the Resource Persons :

Name : Dr. Habiba Hussain
Designation : Associate Professor, Education and Management

Objective of the programme:

- Before you decide on the content to cover in your course, endow your course with a strong internal structure conducive to student learning.
- Alignment among three main course components ensures an internally consistent structure. Alignment is when the:

- OBJECTIVES articulate the knowledge and skills you want students to acquire by the end of the course
- ASSESSMENTS allow the instructor to check the degree to which the students are meeting the learning objectives
- INSTRUCTIONAL STRATEGIES are chosen to foster student learning towards meeting the objectives

When these components are not aligned, students might rightfully complain that the test did not have anything to do with what was covered in class, or instructors might feel that even though students are earning a passing grade, they haven't really mastered the material at the desired level.

Topic Covered:

- How learning actually changes the physical structure of the brain.
- How existing knowledge affects what people notice and how they learn.
- What the thought processes of experts tell us about how to teach.
- The amazing learning potential of infants.
- The relationship of classroom learning and everyday settings of community and workplace.
- Learning needs and opportunities for teachers.
- A realistic look at the role of technology in education.

Outcome of the programme:

To simply put, Learning Outcomes are any measurable skills, abilities, knowledge or values that the student demonstrates as a result of completing a given course or class. ... It is completely student-oriented and describes what both the students have to learn and what the instructor will teach.

ABOUT THE DEPARTMENT

The Department of Mechanical Engineering was established in the year 2002 with an intake of 60 students and in course of time it has increased to 180.The department offers UG and PG programs. PG programs are being offered in specialization of Machine Design and Thermal Engineering. The department is recognized as research and development center by JNTUK, Kakinada. The department has excellent infrastructure like E class rooms, AC seminar hall and is well equipped with modern laboratories. Department has equipment beyond curriculum like stir casting machine, 3D printer, Fatigue testing machine, Five gas analyzer, Ultrasonicator, Tool makers microscope, magnetic particle tester etc,.The department has highly qualified, experienced, dedicated faculty with industry and research background. The department has received funding from different agencies like UGC, AICTE towards MODOROBS, FDP etc. Department frequently organizes guest lectures, industrial visits, workshops, training programs and provide internships for betterment of students.

OBJECTIVE OF WORKSHOP

The classical optimization techniques are useful in finding the optimal solution or unconstrained maxima or minima of continuous and differentiable functions. These are analytical methods and make use of differential calculus in locating the optimum solution.
The classical methods have limited scope in practical applications as some of them involve objective functions which are not continuous and/or differentiable.

Yet, the study of these classical techniques of optimization form a basis for developing most of the numerical techniques that have evolved into advanced techniques more suitable to today's practical problems.

Therefore, the course is aimed at making participants aware about the different optimization techniques and the tools available for this purpose. The participants will be exposed to application of MATLAB in optimization.

Even Hough, the course is intended to cover fundamental theoretical and algorithmic aspects of optimization, the emphasis will be on applied optimization using MATLAB and its applications in the context of Engineering.

COURSE CONTENT

- Basic concepts and classification of optimization techniques
- Objective functions and constraints
- Mathematical Modeling
- Nonlinear optimization
- Multiobjective optimization
- Solutions of optimization problems using MATLAB

Topic Covered:

Combining the key applications from the Dassault Systems software brands. The 3DEXPERIENCE platform is a simple, unified PLM environment. The architecture means that product data can be transferred seamlessly between all applications, providing the user with a single, easy-to-use interface.

Now more than ever, manufacturing excellence depends on streamlining operations on the plant floor and throughout the product supply network. However, traditional factory Manufacturing Execution System (MES) solutions focus mainly on the plant floor, with minimal integration beyond the four walls or across business functions

Outcome of the programme:

By the end of this unit, faculty should be able to:

- list the distinctive features of rural development and explain the origins of rural development in relation to the failure of past development policies to benefit the poor and stimulate growth
- explain how, in the 1970s, concerns for efficiency and equity were reflected in policies relating to the green revolution, integrated rural development and the 'basic needs' approach and to critically assess the relevance of these policies for the 21st century
- explain critically the role and origins of 'participation' in rural development
- outline the different dimensions of sustainability and their relevance to the problems of rural development

Objective of the programme:

Over the past few decades, manufacturing has evolved from a more labor-intensive set of mechanical processes (traditional manufacturing) to a sophisticated set of information

technology- based processes (advanced manufacturing). Thus, manufacturing industries today encompasses a dimension scale of more than fifteen orders of magnitudes. The design and manufacture of huge machinery, ship and space crafts on one side while nano and Pico technology on the other side of the dimension scale, highlights the challenges ahead for engineers and technologists. With the advancement of technology newer materials, energy sources, manufacturing technology, decision- making and management technique are being developed.

At the same time, newer challenges in the form of environmental and issues put stringent requirements on the technology. Global competitions, the thrust on quality and demand for higher productivity are the some of the challenges before the present industrial and manufacturing units. In view of the above, a nation should develop and update its infrastructure, such that the new and advanced technology gets into hand with the ongoing time.

Emergence of new materials has resulted in advanced technology of manufacturing being used in industry. The objective of the program is to expose the teachers to advanced manufacturing technology.

Topic Covered:

- Non-Conventional manufacturing methods
- Surface texture and manufacturing processes
- Cutting parameter optimization
- Rapid Prototyping
- Control systems in Advanced Manufacturing Methods

Outcome of the programme:

Now more than ever, manufacturing excellence depends on streamlining operations on the plant floor and throughout the product supply network. However, traditional factory Manufacturing Execution System (MES) solutions focus mainly on the plant floor, with minimal integration beyond the four walls or across business functions.

Today, manufacturers are using DELMIA Enterprise MES, or MOM, to transform their operations by automating, executing and managing the performance of business processes across the value chain. With DELMIA MES technology, you can achieve end-to-end integration of supply

chain operations, full product traceability, real-time production management, and globally standardized manufacturing processes. Thanks to a single view of manufacturing processes and a single version of the truth, DELMIA solutions enable enterprises to elevate their operational excellence, creating more value not only for themselves but for their customers.
