WHAT ARE GEOSPATIAL TECHNOLOGIES?

- **Geospatial technologies** is a term used to describe the range of modern tools contributing to the geographic mapping and analysis of the Earth and human societies.
- There are now a variety of types of geospatial technologies including the following:
 - Remote Sensing
 - Geographic Information Systems (GIS)
 - Global Positioning System (GPS)
 - Internet Mapping Technologies

The Industrial Internet of Things

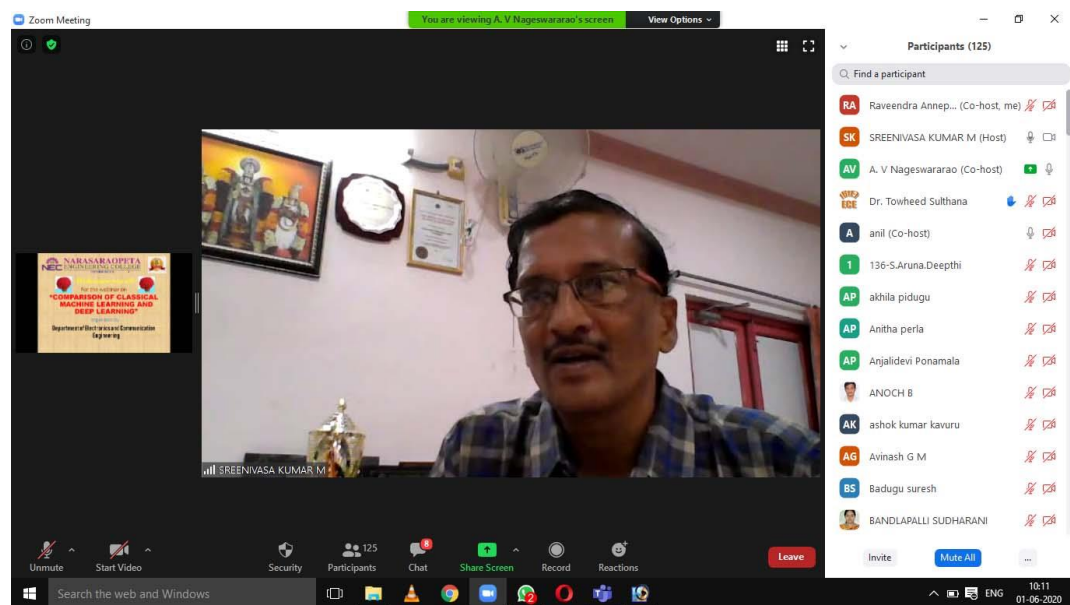

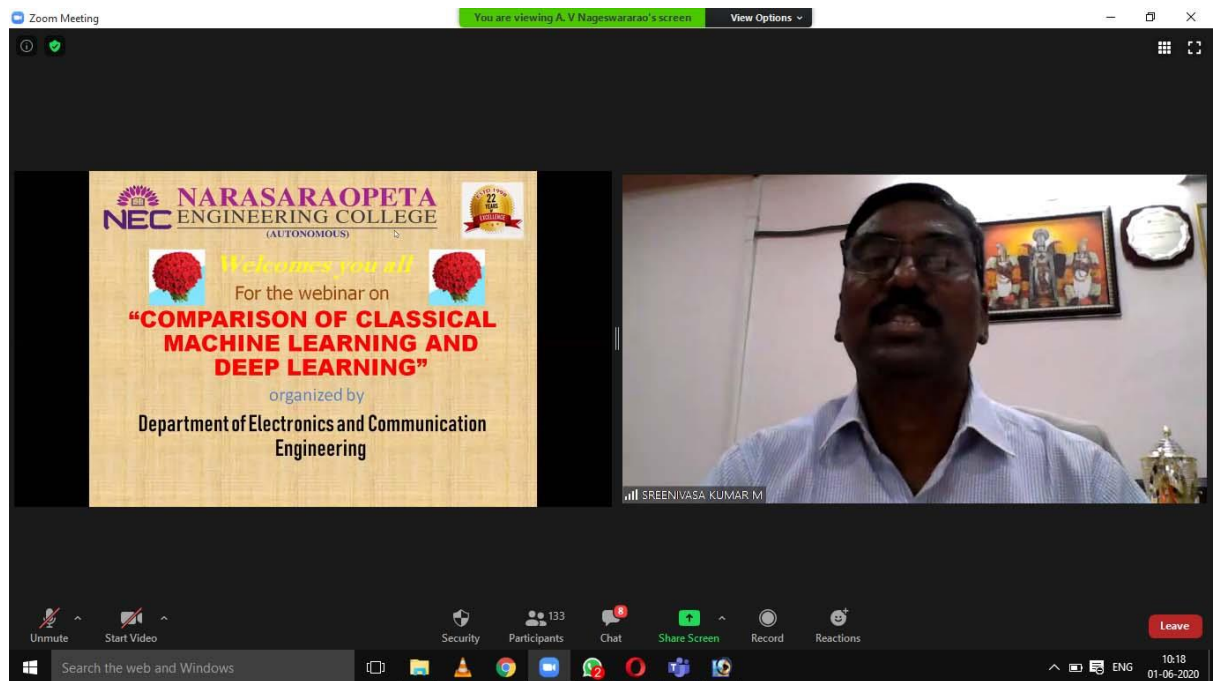

- Convergence of information technology systems (which handle computing and data processing) and operational technology systems (which manage and control industrial operations).
- Traditionally, IT is responsible for creating, storing, and securing an organization's data while OT focuses on processes that take place in the physical world like managing productivity, people, and machinery.
- Successful IT/OT convergence will result in better automation, more optimized performance, significant cost savings, and full visibility across the entire operational process.
