Objective of the programme:

This training programme is specially designed for Engineering College Teachers and it mainly deals with various aspects of programme logic controls. The course aims to achieve the following objectives:

- To update the knowledge in the emerging and upcoming topics in the subject area.
- To make the teachers conversant with relevant practices in programmable Logic Controller.

A programmable Logic Controller (PLC) is a digital computer used for automation of typically industrial electromechanically processes, such as control of machinery, factory assembly lines, light fixtures are used in many machines in my industries.

Topic Covered:

- Hardware details of SIMATIC controllers, Programming language, NO/NC Concept.
- Positive and Negative Trigger, Set/Reset Instructions.
- SR&RS Flip-Flop, Latching concept. On-Delay timer, Retentive on delay timer, OFF-

Delay timer, pulse timer. Data block, Industrial Based comparators, up Counter, Down Counter, Up/Down Counter and Industrial Based Applications on Counters.

- Subroutine Programming Blocks FC, FB. Analog value processing and different industrial based applications on Analog. Brief Introduction of SCADA, HMI and DCS System.

Outcome of the programme:

- A PROGRAMMABLE LOGIC CONTROLLER (PLC) is an industrial computer control system that continuously monitors the state of input devices and makes decisions based upon a custom program to control the state of output devices.
- These controllers can automate a specific process, machine function, or even an entire production line
- Flexible in Nature: One model of PLC can be used for different operations as per requirement.
- Easy to install and troubleshooting: In hard wired relay based systems, installation time is more as compared to the PLC based control panels.

About Amazon Web Services(AWS) Specific Training:

Aws is designed to interoperate fully with Java, and the JVM version of Kotlin's standard library depends on the Java Class Library but type inference allows its syntax to be more concise. Kotlin mainly targets the JVM, but also compiles to JavaScript (e.g., for frontend web applications using React) or native code via LLVM (e.g. For inherent IOS apps sharing business logic with Android apps) Language development costs are borne by Jet Brains, while the Kotlin Foundation protects the Kotlin trademark.

On 7 May 2019, Google announced that the AWS programming language is now its preferred language for Android app developers. Since the release of Android Studio 3.0 in October 2017, Kotlin has been included as an alternative to the standard Java compiler

About AWS Cloud Computing:

Amazon Web Services, Inc. (AWS) is a subsidiary of Amazon that provides on-demand cloud computing platforms and APIs to individuals, companies, and governments, on a metered pay-as-you-go basis. These cloud computing web services provide distributed computing processing capacity and software tools via AWS server farms. One of these services is Amazon Elastic Compute Cloud (EC2), which allows users to have at their disposal a virtual cluster of computers, available all the time, through the Internet. AWS's virtual computers emulate most of the attributes of a real computer, including hardware central processing units (CPUs) and graphics processing units (GPUs) for processing; local/RAM memory; hard-disk/SSD storage; a choice of operating systems; networking; and pre-loaded application software such as web servers, databases, and customer relationship management (CRM).

OBJECTIVE OF PROGRAM

This training Programme is specially designed for AI students and it mainly deals with various aspects of AWS Applications. The course aims to achieve the following objectives:

To update the knowledge in the emerging and upcoming topics in the subject area.

To make the students conversant with relevant practices in AWS Applications.

Why choose:

Cloud computing is the on-demand delivery of IT resources over the Internet with pay-as-you-go pricing. Instead of buying, owning, and maintaining physical data centers and servers, you can access technology services, such as computing power, storage, and databases, on an as-needed basis from a cloud provider like Amazon Web Services (AWS).

The Programme will be designed around the following major topics:

1. AWS Introduction
2. Literate Programming.
3. Spin up test environments.
4. Launch simple web applications
5. Create custom websites.
6. Create a website or application in just a few clicks

About Python Programming:

Python is an interpreted high-level general-purpose programming language. Its design philosophy emphasizes code readability with its use of significant indentation. Its

language constructs as well as its object-oriented approach aim to help programmers write clear, logical code for small and large-scale projects.

Python is dynamically-typed and garbage-collected. It supports multiple programming paradigms, including structured (particularly, procedural), object-oriented and functional programming. It is often described as a "batteries included" language due to its comprehensive standard library.

OBJECTIVE OF COURSE

This training Programme is specially designed for MCA students and it mainly deals with various aspects of python programming. The course aims to achieve the following objectives:

To update the knowledge in the emerging and upcoming topics in the subject area.

To make the students conversant with relevant practices in Python programming.

The Python program is a scripting language that can be used for development, coding websites and applications, processing images, scientific data, and more. The program can be found in action on the Google search engine, NASA, Disney, Pinterest, and more. It was built for ease of use and speed and is less complicated than Ruby and other similar object-oriented programming languages. Because it is open-sourced, the program has enjoyed popularity among developers and programmers, and it continues to be the base program for most websites in operation on the internet today

The Programme will be designed around the following major topics:

Python Introduction
Python basics
Keywords in Python,
Operators in Python Conditional Statements
Iterations

About Python Programming:

Python is an interpreted high-level general-purpose programming language. Its design philosophy emphasizes code readability with its use of significant indentation. Its

language constructs as well as its object-oriented approach aim to help programmers write clear, logical code for small and large-scale projects.

Python is dynamically-typed and garbage-collected. It supports multiple programming paradigms, including structured (particularly, procedural), object-oriented and functional programming. It is often described as a "batteries included" language due to its comprehensive standard library.
