Objective of the Program :

Amazon Simple Storage Service (Amazon S3) is an object storage service that offers industry-leading scalability, data availability, security, and performance. Customers of all sizes and industries can use Amazon S3 to store and protect any amount of data for a range of use cases, such as data lakes, websites, mobile applications, backup and restore, archive, enterprise applications, IoT devices, and big data analytics. Amazon S3 provides management features so that you can optimize, organize, and configure access to your data to meet your specific business, organizational, and compliance requirements.

Amazon S3 Express One Zone is a high-performance, single-zone Amazon S3 storage class that is purpose-built to deliver consistent, single-digit millisecond data access for your most latency-sensitive applications. S3 Express One Zone is the lowest latency cloud object storage class available today, with data access speeds up to 10x faster and with request costs 50 percent lower than S3 Standard. S3 Express One Zone is the first S3 storage class where you can select a single Availability Zone with the option to co-locate your object storage with your computer resources, which provides the highest possible access speed. Additionally, to further increase access speed and support hundreds of thousands of requests per second, data is stored in a new bucket type: an Amazon S3 directory bucket.

Report on Industrial Visit to Mittapalli Spinners by NEC II B.Tech -ECE
Students (2022 Batch) in November 2023

As a part of Academics students are required to visit industries in order to get the practical knowledge and industrial exposure. Hence, the II Year I Semester students of Electronics and Communication Engineering had visited the Mittapalli Spinners Limited, Narasaraopet on 10 th November 2023 accompanied by single faculty member.

The industry is located near Narasaraopet of Guntur District, A.P. The address of Mittapalli Spinners is given below:

About the company:

Mittapalli Spinners Limited is a Public incorporated and is classified as Non-govt Company. It is involved in Spinning, weaving and finishing of textiles. It produce high quality yarn of all types by using raw cotton

Machinery & The Process Details:

The following are the details of machinery and process details

- Mixing:

An uniform end product consistently from highly variable characteristics of input fibres, mixing of different lots is done.

- Blow room:

Blow room consists state of art machines that carry out Opening, Cleaning, thorough Mixing and decreasing the tuft size smaller and smaller, to feed material to Carding uniformly and continuously. Blow Room line is equipped with world class technology cotton contamination sorter like JOSSI.

- Carding:

"Card is the heart of the spinning mill" and "Well carded is half spun" are two proverbs of the experts. The purpose of Carding is to open tufts to individual fibres, neps reduction, elimination of dust and orientation of fibres into sliver form. In Our Installation we are having a flexibility to run different processes.

- Br.Drawing:

The object of draw frame is to double and draft the slivers and thereby make even sliver and parallelization of fibres i.e. hooks created at Carding are removed. The Machines are equipped with 1000mm cans to avoid no. of joints which directly effects quality of final yarn.

- Lap Former:

The object of Lap Former is preparation of Lap from slivers with optimum parallelized fibres and feeding of trailing hooks from Carding as leading hooks at Comber to reduce long fibre loss in the noil.

- Comber:

Combing is the process which is used to upgrade the raw material and to produce an improvement in yarn quality by elimination of short fibres, elimination of remaining impurities and elimination of neps.

- Fr. Drawing:

 Guntur (Dist.), A.P.

The object of Fr. draw frame is to double and draft the slivers and thereby make even sliver, parallelization of fibres and auto levelling of linear density variations in feeding to get constant linear density of output sliver.

- Simplex:

The object of Simplex is to produce roving suitable to feed Ring frame by means of attenuation - drafting of sliver, twisting the drafted strand and winding the twisted roving on a bobbin. The machinery is equipped with automatic tension controls to produce better quality of roving in order to get best quality of yarn.

- Spinning:

Functions of Ring frame are to draft the roving until the required fineness is achieved, to impart strength to the fiber, by inserting twist and to wind up the twisted strand (yarn) in a form suitable package. The Machinery is equipped with complete auto doffing and link system. By introducing this system, they are able to reduce material handling and avoid unwanted stain marks on yarn. With this auto doffing facility on their ring frames they are having more flexibility in producing wide range of counts.

- Autoconer:

The object of Autoconer is to eliminate the faults and contamination in yarn and joining the ends with splice and winding of long and continuous yarn into conical shape to facilitate at further processes. The latest art of technology's LINK CONERS equipped with AUTO DOFFERS. With the help of these machines they are totally avoiding manual material handling which will directly help them in maintaining best quality of yarn.

- Packing:

In Packing Section they check each and every Cone for visual defects and UV light inspection with the help of this practice they are able to build the confidence of their valued customers for better in supply of better quality yarn. They can produce the package as per the customer requirement.
